Abstract (en)  
[origin: WO2020058029A1] The invention relates to a stroller frame, comprising at least one motor (19), in particular an electric motor, preferably for a supported drive of the stroller frame, at least one adjustment device (20) for adjusting, in particular sliding and/or pivoting, at least one adjustable component of the stroller frame from a first position into at least one second position, and at least one coupling device (21), preferably comprising at least one switching device, such that the potential drive output of the at least one motor is changed, in particular reduced, by at least one adjustment process using the adjustment device (20).
