Abstract (en)
[origin: CA3112948A1] The invention relates to a packet for cigarettes, having an outer packet (11) and an inner packet (12) arranged movably in the outer packet (11) for opening or closing of the packet (10). The inner packet (12) is configured to receive at least one product group as packet content (27), and the inner package (12) is formed from a blank (28) made of packaging material, and the blank (28) has a plurality of walls and, in a position at least partially surrounding the packet contents, extends at least partially along preferably all lateral surfaces of the packet contents of the packaging (27). According to the invention, at least one end wall (31, 34) of the blank (28) of the inner packet (12) is supported by at least one support element (39, 40) of the blank (28) in the position at least partially surrounding the packet contents (27).
