Abstract (en)

[origin: WO2020207968A1] The invention relates to a garment steamer (100) comprising a base (101), a pole assembly (102) mounted on said base (101), a board (103) connected to said pole assembly (102) via a first pivot coupling (C1) extending along an horizontal axis (X1), and an arm element (104) arranged between said pole assembly (102) and said board (103). The arm element (104) comprises a foldable structure adapted to take a folded configuration in which the length (L) of the arm element (104) has a first value (L1) resulting in that the board (103) takes a first angular position compared to the pole assembly (102), and an unfolded configuration in which the length (L) of the arm element (104) has a second value (L2) resulting in that the board (103) takes a second angular position compared to the pole assembly (102).
