Abstract (en)

[origin: WO2020057944A1] The invention relates to an elastic retaining member (1) for attaching a timepiece component (2) to a support element (3), comprising an opening (5) into which said support element (3) can be inserted, the retaining member (1) comprising rigid arms (6) and elastic arms (7) defined between connecting zones (9), helping to ensure elastic clamping of the support element (3) in the opening (5), and each rigid arm (6) being provided with two flat contact zones (8) of the retaining member (1), which can interact with corresponding convex contact portions (10) of the support element (3).
