Abstract (en)

[origin: WO2020057943A1] The invention relates to an elastic retaining member (1) for attaching a timepiece component (2) to a support element (3), comprising an opening (5) into which said support element (3) can be inserted, said retaining member (1) comprising rigid arms (6) and elastic arms (7) defined between connecting zones of said member, these arms helping to ensure elastic clamping of the support element (3) in the opening (5), and each rigid arm (6) being provided with a single convex contact zone (8) of the retaining member (1), which can interact with a corresponding convex contact portion (10) of the support element (3).
