Abstract (en)  
[origin: CA3106918A1] PATENT APPLICATION DOCKET NO. 2460-212.CA ABSTRACT OF THE DISCLOSURE A floor drain includes a channel body defining a longitudinal direction and including two outflow channels which extend parallel to each other, each having a channel bottom and two channel walls. A connecting bar extends horizontally and connects the upper mutually facing longitudinal edges of the channel walls. An outflow opening interrupts the connecting bar and the channel walls directly connected thereto. An outflow fitting is arranged below the channel body and surrounds the outflow opening in the circumferential direction. At least one slat-like connecting element is detachably mounted on the channel body and is designed in such a way that it continues the connecting bar and the channel walls in the region interrupted by the outlet opening. 23 Date Recue/Date Received 2021-01-22
