Abstract (en)
[origin: WO2020064563A1] The invention relates to a mold intended for cooking food, in particular for cooking pastry, comprising at least one cavity for receiving food to be cooked, this cavity comprising an upper edge connected to an upper wall of the mold and a wall for receiving food to be cooked which extends from the upper edge. In accordance with the invention, the receiving wall has a substantially constant thickness E and comprises one or more zones having a thickness Er smaller than the thickness E, and a surface area Sr, the thickness Er being substantially constant over the surface area Sr.
