Abstract (en)
[origin: WO2020064603A2] An aerosol delivery device comprises: a member (220) comprising an aerosol generator portion (222), wherein the member (220) is configured to transfer a first aerosol precursor to the aerosol generator portion (222); and an air flow passage (208) configured to direct air past the aerosol generator portion (222) to pick up the first aerosol precursor from the aerosol generator portion (222) to form a first aerosol, wherein the air flow passage (208) comprises first and second airflow branches (210, 212), the member (220) located between the first and second airflow branches (210, 212), wherein the first and second airflow branches (210, 212) are configured to provide inward airflow towards the aerosol generator portion (220).
