Abstract (en)

[origin: WO2020126402A1] The present invention relates to a press pad (1) for use in hydraulic heating press systems (15), comprising a woven fabric (2), the woven fabric (2) being formed by warp yarns (3) in a warp direction and weft yarns (4) in a weft direction, said yarns being interwoven with one another to form the woven fabric (2). In order to provide a press pad that is improved as compared to the prior art, it is proposed according to the invention that functional yarns (7) are connected to the rest of the woven fabric (2) in the warp direction and/or in the weft direction in such a way that a thickness (9) of the woven fabric (2) is altered in an effective region (21) of the functional yarns (7) as compared to a thickness (10) of the woven fabric (2) outside the effective region (21).
