Abstract (en)

[origin: WO2020083620A1] The invention relates to a braking resistor for an assembly in a section of a vehicle shell of an electrically driven vehicle or in the immediate vicinity of such a section, characterised in that said braking resistor has a plurality of braking resistor elements which are arranged parallel to one another and which each consist of a tubular casing consisting of a thermally conductive material having an electrical conductor which is arranged therein and is embedded in a thermally conductive, electrically insulating material.
