Abstract (en)

[origin: WO2020065163A1] The invention concerns a method for remotely controlling the functions of locking/unlocking and starting a motor vehicle by means of mobile telecommunication devices, implemented by a control system installed in the vehicle, comprising a step of receiving an unlocking command originating from one of the mobile devices, characterised in that it comprises, in response to receipt of this command, the sending of a stream of messages to the mobile devices, by the control system, these messages comprising a piece of identification data of the mobile device that has commanded the unlocking, and an invitation to this device to connect in order to receive a start notification.
