Abstract (en)
[origin: WO2020065220A1] The invention concerns an annular assembly for a dual flow turbine engine having a longitudinal axis (A) and comprising a housing (12) comprising an annular shroud (14), one face of which supports a piece of annular equipment, a plurality of attachment means (18) for attaching the equipment to the annular shroud (14) being distributed around the longitudinal axis (A) and allowing the equipment (16) a degree of freedom in the tangential direction relative to the annular shroud (14), characterised in that each attachment means (18) comprises a rail (20) secured to the annular equipment (16) and arranged radially between a first radially inner plate (22) and a second, radially outer plate (24) and capable of sliding in the tangential direction between the first plate (22) and the second plate (24), and in that a removable support element (56) is securely connected to the annular shroud and to the first plate (22) and the second plate (24).
