Abstract (en)

[origin: WO2020064709A1] The invention relates to a network-compatible domestic appliance (2) having a communications device (6) for being coupled via data link to an external database (7), the domestic appliance (2) being designed to receive operating parameters (R1, R2), which are relevant for an operating sequence, from the database (7) via the communications device (6) and to store said operating parameters for carrying out an operating sequence, and, initiated by a user, to transmit the operating parameters (R1, R2), which are relevant for an operating sequence carried out by the domestic appliance (2), automatically to the database (7) via the communications device (6). A domestic appliance system (1) has at least one network-compatible domestic appliance (2) and a database (7) which can be coupled via a network (N) to the at least one domestic appliance (2) and is configured to store operating parameters (R1, R2) for an operating sequence of the domestic appliance (2) and to provide said operating parameters retrievably to the at least one domestic appliance (2). A method (S1-S4) used to operate a network-compatible domestic appliance (2). The invention is particularly advantageously applicable to cooking appliances as domestic appliances.
