Abstract (en)

A machine (10) for shaping metal bars according to curved profiles, in particular according to spiral or helical profiles, of the type comprising:- a set of rotating rollers (2I-2IV), pre-arranged for forming a path of feed (K) of a metal bar along a preset curved profile;- a positioning member (4), pre-arranged for receiving said bar and defining a predetermined pitch of said curved profile in a reference direction (Y), said member being adjustable in position; and- a cutting member (6), pre-arranged for cutting said bar so as to separate the shaped part of said bar from a remaining portion and define a trailing end of said shaped bar, with reference to said path of feed (K) .
