Abstract (en)

[origin: EP3858553A1] The subject of the invention is a locking latch, in particular for modular organizers, characterized in that it comprises an upper part of the locking latch, a lower part of the locking latch and an axle of the locking latch, wherein the upper part of the locking latch and the lower part of the locking latch are mounted separately on the axle of the locking latch, thereby forming a mechanism that enables independent movement of said parts, wherein one part of the locking latch has mounting tabs for securing the locking latch in the organizer cover, while both parts of the locking latch are provided with at least one catch for snapping on the organizer body
