Abstract (en)

[origin: EP3858563A1] A razor having a novel rotatable mesh structure comprising a razor body assembly and a shaving head assembly, wherein the mounting foundation of the razor body assembly is a shell and a gearbox. The shaving head assembly comprises a head cover, a blade body assembly and a blade body supporting assembly, wherein the head cover, the blade body assembly and the blade body supporting assembly are combined into a whole. The blade body assembly is attached to the head cover through a fulcrum. The outer-circle mesh may rotate forwardly and reversely, which allow the facial hairs to be thoroughly captured, thus achieving good shaving effect. The plurality of circles of meshes are provided with a plurality of hair slots, which enables the facial hairs to be quickly shaved off.
