Abstract (en)
[origin: CN115467081A] The invention relates to a warp knitting machine. The invention relates to a warp knitting machine (1) having a longitudinal guide bar assembly driven by a drive train, the guide bar assembly being divided into at least two guide bar sections (2, 3) arranged next to one another and the drive train acting on the two guide bar sections (2, 3). It is expected that high productivity of a warp knitting machine can be achieved in a simple manner. For this purpose, it is provided that the drive train has drive train sections corresponding to the number of the guide bar sections (2, 3), said drive train sections influencing the guide bar sections (2, 3) with different phases having a difference.
