Abstract (en)
[origin: WO2020070415A1] The invention relates to an accessory of light-sabre type (1) comprising: – a tubular blade (2) comprising a tube (5) comprising a proximal end (51) and a distal end (52); - a handle (3) comprising a sleeve with a first end and a second end, into which handle there is inserted a control unit controlling at least one source of illumination of the tubular blade (2), and - a system for the removable attachment of the tubular blade (2) to the handle (3) via its proximal end (51), which system is made up of an end-piece pushed into the proximal end (51) of the tube (5) and of a clamping ring engaged so as to be pushed over the end piece and fixed to the first end of the handle. According to the invention, the end-piece is fixed to the outside of the tube (5) and comprises a shoulder able to come into abutment against the first end of the sleeve and the sleeve comprises, starting from its first end, a well in which the end-piece is engaged as far as its shoulder, the clamping ring being engaged from the distal end (52) of the tube (5) so as to be pushed on to the end-piece.
