Abstract (en)  
[origin: WO2020069723A1] The present invention provides a linear LED light source, comprising a plurality of LED units (12) conductively connected to metallic support frames (13a, 13b), wherein the metallic support frames (13a, 13b) are configured to serve as supply conductors through which electric power for driving the LED units (12) is feedable to the LED units (12), wherein the metallic support frames (13a, 13b) are manufactured from an alloy and with a diameter such that they have an electrical resistance between 50 mΩ/m and 200 mΩ/m.
