Abstract (en)

[origin: WO2020069688A1] The invention relates to a method for capturing data of rollers, which are used to produce or process web-shaped products, wherein data are processed by a data processing device installed in the end face of a roller and, in addition to time, acceleration and velocity, additional data are also processed. This is achieved by a data processing apparatus having a sensor and a data memory, which can be inserted into a cylindrical opening on the end face of the roller.
