Abstract (en)

[origin: WO2020070075A1] The invention relates to a method for wirelessly transmitting data between at least one transmitter (BASE) and a plurality of receivers (USRi) comprising a step of estimating all the channels available between the transmitter and each of the receivers (USRi) comprising:  
- a step of constructing a correspondence table between at least two unique identifiers (MACi) of receivers from among the plurality of receivers (USRi) and at least two channels (B1, B3) from among the available channels (Bj); and - a step of transmitting data between the transmitter (BASE) and at least one of the receivers (USRi), via at least one of the available channels (Bj), the data transmission lacking the transmission of any unique transmitter identifier.
