Abstract (en)
[origin: WO2020072963A1] Embodiments of a User Equipment (UE) and methods of communication are generally described herein. The UE may receive control signaling that configures one or more control resource sets (CORESETs). The CORESETs may be configurable to span variable numbers of resource blocks (RBs) in the frequency domain. The CORESETs may be configurable to span variable numbers of orthogonal frequency division multiplexing (OFDM) symbols in the time domain. Each of the CORESETs may be allocated for reception of one or more physical downlink control channels (PDCCHs). The UE may determine a duration of a PDCCH monitoring span, which may indicate a number of consecutive OFDM symbols in which the UE is to monitor for PDCCHs. The UE may determine the duration of the PDCCH monitoring span to be equal to a maximum of the numbers of OFDM symbols spanned by the CORESETs.
