Abstract (en)

[origin: KR20200049545A] The present disclosure relates to a 5th generation (5G) or pre-5G communication system for supporting a higher data rate than a 4th generation (4G) communication system such as long-term evolution (LTE). The present disclosure relates to a method for controlling a measurement operation in a wireless communication system. A method for operating a terminal includes the steps of: receiving a message for controlling a measurement operation from a base station; and controlling the measurement operation based on the message. The message includes information for indicating an object to which the controlled measurement operation is applied.
