Abstract (en)
[origin: EP3861890A1] A baby carrier having a load distribution function according to the present invention may include: a band portion formed to be supported on a user's waist; a hip seat portion provided in front of the band portion and formed to seat a baby thereon; a back plate disposed behind the band portion and formed to be supported on an upper end of a user's hip; at least one moving member formed to vary a connection position of the band portion to the back plate; and a fastener unit formed to move the moving member to bring the back plate into close contact with a user's body or release a close contact state.
