Abstract (en)

[origin: CA3106489A1] The invention relates to a capsule closure device for closing two-piece capsules (20) each having a capsule upper portion (21) and a capsule lower portion (22). The capsule closure device (1) comprises a capsule upper portion receiving member (2) and a capsule lower portion receiving member (3). The capsule upper portion receiving member (2) has a receiving hole (4) and an introduction hole (5) which is arranged coaxially relative to the receiving hole (4). The capsule upper portion receiving member (2) has at the inner side (11) thereof between the receiving hole (4) and the introduction hole (5) a support shoulder (6) for supporting the capsule upper portion (21). The capsule upper portion receiving member (2) has at the inner side (11) thereof a ventilation groove (9), wherein the ventilation groove (9) extends from the receiving hole (4) to the introduction hole (5).
