Abstract (en)

Rotary engine comprising:- a housing (110) provided therein with a receiving space (S) to which a rotor (20) is rotatably coupled, the housing having an intake port (111) and an exhaust port (113);- a heating unit (120) formed in a first section (A) of the housing (110), the intake port (111) being provided in the first section, the heating unit (120) being configured to heat the housing (110) cooled during intake and compression strokes; and- a cooling unit (130) formed in a second section (B) of the housing, the exhaust port (113) being provided in the second section, the cooling unit (130) being configured to cool the housing (110) heated during combustion and exhaust strokes.
