Abstract (en)

[origin: WO2020074725A1] The present invention relates to the field of odour treatment. In particular, the invention relates to a method for managing a waste gas treatment device. The method comprises the following steps: - a step of taking into account gaseous pollutant concentration predictions at at least one point in a predefined geographical area (100); a step of comparing each predicted gaseous pollutant concentration at the at least one point of the predefined geographical area with a gaseous pollutant concentration reference value; - a step of transmitting, to a control unit (11) of a bypass air line (8) of a waste gas treatment unit (4), a command to at least partially open the bypass air line (8) when the result of the comparison indicates that at least one predicted gaseous pollutant concentration value is less than a gaseous pollutant concentration reference value.
