Abstract (en)

[origin: WO2020109054A1] The invention relates to an anti-climber device (1) for a rail vehicle, comprising an impact plate (2) having a plurality of protruding formations (3), wherein the profile of the formations (3) when the anti-climber device (1) is in the installed position is formed as a polygonal curve with a repeating sequence of sections which rise (4) and fall (5) relative to the horizontal, and wherein the extent of the formations above the surface of the impact plate (2) follows a polygonal curve with a repeating sequence of rising and falling sections.
