Abstract (en)
[origin: WO2020074086A1] There is provided a package for sheet products. The package comprises a covering which defines an internal space of the package. The internal space is configured to hold the sheet products within the internal space. The covering defines a releasable tab. The releasable tab is configured to be only partially releasable from the covering so as to open a dispensing aperture in the covering. The dispensing aperture is configured to allow dispensing of the sheet products from the package. The releasable tab, once released, is configured such that a first, fixed portion of the releasable tab remains fixed to the covering. The releasable tab, once released, is configured such that a second, releasable portion of the releasable tab is attachable to a portion of the covering such that the releasable tab forms a handle between the first, fixed portion and the second, releasable portion for carrying the package.
