Abstract (en)

[origin: WO2020074180A1] The invention relates to a splicing device (1) for splicing yarn. The splicing device (1) comprises a valve block housing (2) having a valve block housing casing (3) and one or more line elements (4), more particularly tube elements, for transporting fluids, more particularly compressed air. The valve block housing casing (3) encloses the interior of the valve block housing (2). The one or more line elements (4) are arranged continuously in the interior of the valve block housing (2). By means of the line element or line elements, a fluid supply connection (40) is connected to an actuator element connection for an actuator element (13). The valve block housing (2) is produced integrally with the line element or line elements (4).
