Abstract (en)

[origin: WO2020074579A1] The invention relates to a clamping device for pre-tensioning a fastening element, wherein: the fastening element is suitable, in a device for conveying fluid, for fastening a diaphragm pump head part to a drive for impressing motion onto a diaphragm of the diaphragm pump head part; the clamping device has a support with a support surface for supporting a support face of the fastening element, the support having a threaded bore, which is penetrated by a screw element, and the screw element having a contact face at its front end; and the contact face of the screw element and the support surface of the support point in opposing directions and the distance between the contact face of the screw element and the support surface of the support can be changed by screwing the screw element in or out.
