Abstract (en)

A door system for a cabinet comprises a door panel (30) which is intended and configured to close a cabinet space of the cabinet (10). A first hinge device (40) and a second hinge device (50) are mounted at opposite outer ends of a pivot axis of the door panel (30), and each comprise a first hinge part (41, 52, 55) to be connected to the cabinet (10) and a second hinge part (35, 36, 37) connected to the door panel (30). The door system comprises at least one elongate mounting profile (20) with an open profile chamber (25) which extends axially therein and is bounded by a bottom (23) and opposite walls (21, 22). Each of the opposite walls of the profile chamber comprises a guide extending axially therein. The first hinge part of the hinges (40, 50) is receivable in the profile chamber (25) and is provided on opposite longitudinal sides with a guide member (52, 47) which is receivable for axial movement in the guide (27) of the adjacent wall of the profile chamber.
