Abstract (en)
[origin: WO2021160668A1] The invention relates to a vacuum cleaner (2) comprising a suction duct (19); a waste separation device (5) fluidly connected to the suction duct (19); a main body (3), in which a motor fan is accommodated; a grip handle (4); a control member (23) which is arranged on the grip handle (4) and which is configured to control an operation of the motor fan according to a first operating mode; and an activation member (24) which can be actuated by a user and which is configured to control an operation of the motor fan according to a second operating mode, wherein the vacuum cleaner (2) is configured such that a maximum speed of rotation of the motor fan in the second operating mode is greater than a maximum speed of rotation of the motor fan in the first operating mode, the activation member (24) being arranged opposite the control member (23).
