Abstract (en)

[origin: WO2020079212A1] The invention relates to a fluid-spraying facility (10) comprising a fluid circulation duct (15) and a scraper (20) that can circulate in the duct (15) in order to push back the fluid present in the duct (15) as it moves forward, the duct (15) and the scraper (20) each having a circular section, the duct (15) having an inner diameter (Di), and the scraper (20) having an outer diameter, the outer diameter having a first value (De1). A difference between the inner diameter (Di) of the duct and the first outer diameter value (De1) of the scraper (20) is greater than or equal to 100 micrometres, preferably greater than or equal to 200 micrometres.
