Abstract (en)

[origin: WO2020079373A1] The invention relates to a material comprising one or more transparent substrates comprising two main faces, characterised in that: - one of the faces of one of the substrates is coated with a functional coating capable of acting on solar radiation and/or infrared radiation, and - a face not coated with the functional coating of one of the substrates comprises a color adjustment reflective coating comprising at least one dielectric layer including one reflective dielectric layer having a thickness of between 2 and 100 nm, all the dielectric layers of the color adjustment reflective coating have a thickness of less than 100 nm.
