Abstract (en)

[origin: WO2020079252A2] The present invention relates to a method for producing an electronic structure on a glass pane (2) which has, at least on one of its two glass pane surfaces (2a; 2b), a functional coating (3) with at least one electrically conductive functional layer, preferably with multiple electrically conductive functional layers, the functional coating (3) being structured by means of laser radiation in such a way that the electronic structure, preferably a capacitive sensor system or a conductor loop, is created. The invention also relates to a glass sheet (1) having at least one glass pane (2) of this type.
