Abstract (en)  
[origin: WO2020078853A1] The invention relates to a passage barrier comprising: a first guide element (2a) and a second guide element (2b), wherein the first guide element (2a) and the second guide element (2b) define a pass-through area (3) through which persons pass from an access area (4) into a passage area (5); and at least one barrier element (6a, 6b) which can prevent and/or enable the passage of persons from the access area (4) into the passage area (5) within the pass-through area (3). At least one of the guide elements (2a, 2b) comprises a profile connecting element (36) for connecting at least one profile of a guide element (2a, 2b) to the base of a building structure, wherein the profile connecting element (36) comprises a vertical profile receptacle (37) for receiving a vertically extending profile (39) on the profile connecting element (36) and the profile connecting element (36) has a horizontal profile feed-through (38) for feeding a horizontally extending profile (40) through the profile connecting element (36).
