Abstract (en)
[origin: WO2020078615A1] The invention relates to a method for determining an area map, comprising server-side receiving of movement data of a mobile device, server-side receiving of orientation data of a camera of the mobile device and server-side receiving of the relevant image of the camera which is associated with the received movement data and orientation data, server-side evaluating of the received image together with the movement data and the orientation data in order to create a server-side point cloud, wherein the server-side point cloud forms, at least in parts, the area map.
