Abstract (en)

[origin: WO2020079219A1] The invention relates to a socket contact element for establishing an electrically conductive connection, having a crimp section for establishing an electrically conductive connection with a line and having a contact box for establishing a releasable electrically conductive connection with a contact box plug, wherein the socket contact element is of one-part design and has a plurality of integrally implemented functions which are based on geometric configurations. The invention further relates to an arcuate semi-finished product for producing a socket contact element, and also to the production method by shaping.
