Abstract (en)
[origin: WO2020079609A1] The invention relates to an induction device (10a-c), in particular an induction hob device, comprising at least one induction unit (12a-c), at least one sensor unit (14a-c) provided for detecting at least one sensor parameter, and at least one control unit (16a-c) provided for analyzing the sensor parameter. In order to provide a generic device having improved properties in respect of a detection of particular parameters, according to the invention, in a mounted position, the sensor unit (14a-c) is positioned above the induction unit (12a-c) and includes a plurality of activity sensor elements (24a-c) which are arranged in a distributed manner and are provided for detecting at least one sensor parameter in the form of an activity parameter of the induction unit (12a-c).
