Abstract (en)

In an aspect, a carrying vessel (1) is provided and includes a main body (10) that defines a storage chamber (S), an actuator (3), a battery (4) and an electrical conduit (5). The main (10) body has an outer surface having an animate character feature (2) thereon that is representative of a feature on a character. The actuator (3) is contained within the main body (10), and which is operatively connected to the animate character feature (2), and is operable to move the animate character feature (2). The electrical conduit (5) operatively connects the battery (4) to the actuator (3) for driving operation of the actuator (3) to move the animate character feature (2). The main body (10) includes a plurality of layers (17) of material. At least a portion of the electrical conduit (5) extends between the plurality of the layers (17).
