Abstract (en)

[origin: CN113285296A] The invention relates to a belt adapter for attaching objects to a belt includes a holding system for attaching the belt adapter to the belt, an opening extending along a vertical axis of the belt adapter, through which opening a carrier element can be inserted into the belt adapter, and a securing element which can be moved between an unlocked position, in which the carrier element can be inserted into and removed from the belt adapter, and a locked position for securely holding a carrier element inserted into the belt adapter in a locked position. A holding system comprises a belt adapter and a carrier element. The belt adapter ensures that the carrier element is reliably and securely held in place in that the securing element is designed to receive at least part of the carrier element and is movably guided along the vertical axis between the unlocked and locked positions.
