Abstract (en)

[origin: CN113293463A] The invention relates to a lap guiding device for a combing machine for guiding a lap (3). The lap guiding device comprises a side frame (18), a cover (24), a pressure roller (8), a lower lap inlet (14) and an upper lap inlet (10). The lower lap inlet (14) comprises a lower cover (15) and a lower lap guide (16), which is at a distance from the lower cover (15) in the region of the lap (3) to be guided, and the upper lap inlet (10) comprises an upper cover (11) and an upper lap guide (12), which is at a distance from the upper cover (11) in the region of the lap (3) to be guided, the upper lap guide (12) is connected to the lower lap guide (16) by a flexible element (17). The upper cover (11) is fastened in the lap guide independently of the upper lap guide (12) by means of a retaining device provided for fastening the upper cover (11) in the side frame (18) or to the cover hood (24) or to the pressure roller (8).
