Abstract (en)

The invention is concerned with a method of communication between a server (10) on one side and a plurality of On-Board-Units (20), OBUs, on the other side for use in the automotive field, wherein each OBU (20) is being installed in a different vehicle (30) and identified by a unique Serial Number, and wherein the communication is taking place within a mobile communication system. The invention is characterized in that the communication between each OBU (20) and the server (10) takes place over an HTTP connection based on a specific format of communication messages comprising mandatory and optional parameters defined by the server (10), and wherein at least the following steps are performed: for the communication to take place, one or several messages of request Request<sub>i</sub> are repetitively made at a preconfigured time by the OBU (20) to the server (10) when the OBU (20) is in an activated state and specific messages of response Response<sub>i</sub> triggered by the server (10) are sent to the OBU (20).
