Abstract (en)
[origin: WO2015149837A1] Methods and apparatuses for controlling at least one device configured to receive scheduled frequency resources of a scheduled system are disclosed. At least one device in inactive mode is allocated a secondary frequency resource independently from scheduling of the scheduled system. A signal is transmitted to the at least one device in inactive mode a signal on the secondary frequency resource to control reception of the scheduled frequency resources. A device in inactive mode receiving the signal on the secondary frequency resource can control reception of the scheduled frequency resources based on the signal.
