Abstract (en)
[origin: WO2020084610A1] A device (10) for flipping stacked cards from a first position to an opposite second position, the device comprising a flexible hollow cup-shaped member (12) having a base portion (13) defining a rim (14), and at least one recess (15) or aperture formed in or proximate a portion of the rim so that when the base portion is placed on a generally flat surface (16), there is formed at least one opening (17) that allows air to pass through when pressure is applied to an outer surface of the cup-shaped member
