Abstract (en)
[origin: US2021171249A1] A safety-cap container with a cap assembly that couples with a finish to close the opening into the interior space. The cap assembly includes an outer cap with an outer wall. A spring member extends from an inner face of the upper wall. An inner cap nests within the outer cap. The inner cap includes an outer cylindrical wall with an inner thread configured to engage with the thread of the finish. The inner cap is rotatable with respect to the outer cap and the spring member engages with an upper face of the transverse wall of the inner cap to bias the transverse wall of the inner cap away from the upper wall of the outer cap.
