Abstract (en)

[origin: WO2020084236A1] The invention relates mainly to a system for locking a lockable sanitary compartment provided with a frame (1) and a mobile door access (2), comprising a device (3) for preventing access to the lockable compartment, at least one detection device configured to detect the presence of at least one individual inside the lockable compartment, means for processing data from the detection device, and means for controlling the locking device (3) which are connected to the data-processing means of the detection device and configured, following the receipt of a command to prevent access to the lockable compartment and provided that the detection device does not detect anyone inside the lockable compartment, to activate the locking device (3) in order to prevent said access.
