Abstract (en)
[origin: WO2020083459A1] The present invention relates to a signal generating device (100) for generating measurement signals (108) for electrical systems, said device comprising: a housing (101) which comprises an electrically conductive material; an energy storage device (102) which is located in the housing; a data interface (104) which is located on the housing and which is designed to receive signal data; a coupling interface (106) which is located on the housing and which can be coupled to the electrical system; and a signal generator (107) which is located in the housing and which is coupled to the electrical energy storage device and the data interface and the coupling interface, wherein the signal generator is designed to generate the measurement signals based on the signal data and to output same via the coupling interface. The present invention also relates to a corresponding measurement device.
