Abstract (en)
[origin: EP3871531A1] This aerosol generation device is provided with at least one element that makes it possible to adjust an aerosol delivery amount, and a controller for controlling the element. The controller is configured to control the element so that an aerosol delivery profile in a preset period in which suction is possible includes an initial period in which said aerosol delivery profile increases with a gradually increasing gradient relative to a time axis, a final period in which said aerosol delivery profile decreases with a gradually decreasing gradient relative to the time axis, and an intermediate period that includes one or more local maximum values between the initial period and the final period.
